#### **SAFETY-RELATED COMPONENT WARNING!!**

COMPONENTS IDENTIFIED BY MARK  $\triangle$  OR DOTTED LINE WITH MARK  $\triangle$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

# PRECAUTIONS FOR INSPECTIONS AND REPAIR WITH POWER OFF

Before beginning repair work after turning OFF the main switch, be sure to first remove CN901 (EH5P), 902 (EH6P) of the main board. When assembling the equipment, be sure to plug this connector last. Even with the main switch turned off, there still remain electrical charges in part of the power circuit. Therefore, plugging in or removing the connector could cause the power supply terminal to short with an adjacent terminal. This could cause possible component damage.

#### Notes on chip component replacement

- · Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

# ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE A SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

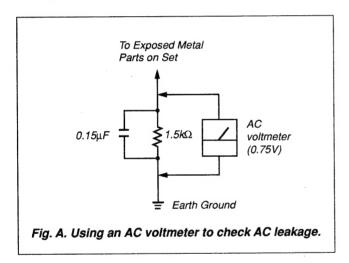

#### **SAFETY CHECK-OUT**

After correcting the original service problem, perform the following safety checks before releasing the set to the customer: Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

#### **LEAKAGE**

The AC leakage from any exposed metal part to earth Ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

- A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
- 2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
- 3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

#### SECTION 3

#### **ADJUSTMENTS**

#### Notes When Making Adjustments

- 1. Adjustments should be performed in the order listed.
- 2. Use the following test tapes:

TY-7111X (8-909-823-00)	Level
TY-7252 (8-909-822-00)	Tracking
TY-7551 (8-909-814-00)	Functions
TY-30B (8-892-358-00)	

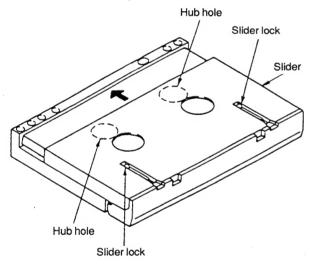

Use the following torque meter:

TW-7131 (8-909-708-71) ..... FWD

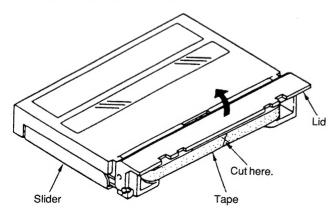

Switches and controls should be set as follows unless otherwise specified.

TIMER switch : OFF
REC MODE switch : LONG
INPUT switch : COAXIAL
SBM switch : OFF
REC LEVEL control : Min.
PHONE LEVEL control : Min.

- 4. Creating an end sensor cassette
  - (1) Press the tape slider lock and move the slider in the direction indicated by the arrow.

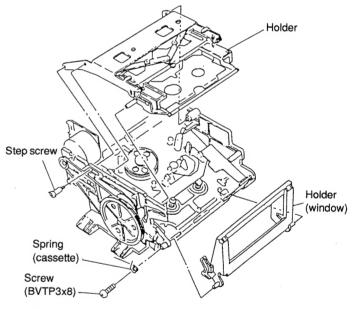

(2) Open the lid and cut the tape.

(3) Turn the hubs until the tape is completely inside the cassette (both T and S sides).

The end sensor cassette for end sensor adjustment is now ready for use.

- 5. Cleaning of the Revolving Drum
  - (1) Fold a chamois (2-034-697-00) or a knit cloth into 4 or more files, slightly impregnate it with a cleaning liquid (9-919-573-00), and softly touch the drum with it and manually rotate the drum slowly counterclockwise by 2 to 3 turns for cleaning.
  - (2) At that time, be careful not to move the chamois vertically to the head tip. Otherwise, the head tip may probably be damaged.
- Be careful not to move RV1 to RV2 on the RF AMP board in the mechanism assembly.
- To adjust the tape path and guides, remove the holder assembly as shown in the diagram and use the DAT holder jig (J-8000-002-A). This will make it easier to perform the adjustments.
  - First turning the pulley counterclockwise to put it in loading out status will make removal and reattachment of the holder assembly easier.
  - To perform adjustments, turn the pulley clockwise to put it in loading in status, load the cassette tape and set the IN switch to the ON position.

- 8. Test mode
  - (1) Test mode (main)

To set the test mode, short-circuit JW091 (X TEST) and ground of the main board. (At this time, the dB display of the fluorescent display level meter will blink.)

Perfom the following adjustments in the test mode.

- FWD torque adjustment
- FWD back tension check
- Tape path fine adjustments
- DPG adjustment
- · AGC voltage check
- · End sensor check
- To reset the test mode (main), disconnect the wire shorting JW091 (X TEST) and ground. After completion of adjusting, be sure to reset the test mode (main).

(2) Test mode (display)

Setting:

TIMER switch : Center click INPUT switch : Center click REC MODE switch : Center click

- 1) Disconnect CN901 and CN902 of the main board after turning off the power supply.
- Short-circuit the testland (TEST) and ground of the display board.
- To check the fluorescent display, insert CN901 and CN902 and turn on the power.

Each grid of the fluorescent display tube sequentially lights up while all tubes being lighted up finally.

≥

Level meters go out one after one.

≥

When all the level meter go off, the NEXT RMC will be displayed.

≥

Every time the panel switch is operated, one level meter goes off from the left, the dB display of level meter will be disappeared finally.

≥

The NEXT RMC will be displayed when the STOP (■) button is pressed.

- To reset the test mode, turn the power off and disconnect the wire shorting test land (TEST) and ground.
- 9. Check the following items for correct tape speed, after completion of adjusting.
  - (1) Set the REC MODE switch to 48k and check for normal recording and playback. (xl)
  - (2) Set the REC MODE switch to LONG and check for normal recording and playback. (x0.5)
  - (3) With QUE (►+►►) or REVIEW (►+►►), check that qurrr, qurrr sound is heard. (x3, x8)
  - (4) Check that correct time is displayed after FF (►►) or REV (◄◄). (xl6)
  - (5) Check that AMS (►►, ►►) is normal.

#### 3-1. ELECTRICAL ADJUSTMENTS

#### **FWD Torque Adjustment**

#### Procedure:

- 1. Set the test mode (main) and load the FWD torque meter TW-7131 (8-909-708-71).
- 2. Set the PLAY () mode. "TORQUE" will be displayed on the fluorescent indicator tube.
- Adjust RV451 so that the minimum value of FWD take up torque (take-up side rewinding torque) is between 9 10g cm (0.13 0.14 oz inch).
  - Also, make sure that the maximum reading does not exceed 15g cm (does not exceed 0.21 oz inch).
- Confirm that the value indicated by the torque meter is maintained for one full cycle.

#### **FWD Back Tension Check and Adjustment**

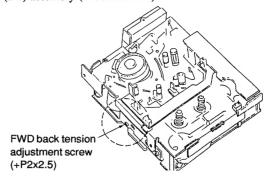

#### Check procedure:

- 1. Put the set into the test mode (main servo) and load the FWD torque meter TW-7131 (8-909-708-71).
- 2. Put the set into the PLAY () mode.
- 3. Turn the FWD back tension adjustment screw locked on the mechanical deck side so that the minimum value of FWD back tension torque (supply side) is between 4.5 to  $7.5g \cdot cm (0.06 0.1 \text{ oz} \cdot inch)$ .

Also, make sure that the maximum reading does not exceed 8g • cm (does not exceed 0.11 oz • inch).

After completion of adjusting, be sure to apply screw lock.

- 4. Confirm that value indicated by the torque meter is maintained for one full cycle.
- 5. If the specified values are not satisfied, replace the lever (BT) assembly (X-3363-024-1).

To tighten (clockwise) — back tension becomes larger. To loosen (counterclockwise) — back tension becomes smaller.

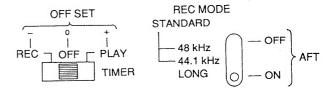

#### Tape Path Fine Adjustments (x1.5 FWD Mode)

Perform the following adjudtment when the drum has been replaced.

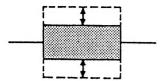

#### Procedure:

- Connect an oscilloscope CH-l to JW183 (PBRF) and CH-2 to JW092 (SWP) on the main board.
- Set the test mode (main) and load test tape TY-7252 (8-909-822-00).
- 3. Press the AMS (►►) key. "DPG" will be displayed on the fluorescent indicator tube.

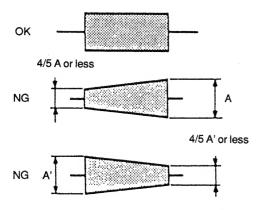

Each part of switches on Test Mode.

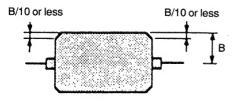

4. With the REC MODE switch set to 48kHz (ATF: OFF) and the TIMER switch set to PLAY or REC (OFFSET: + or -), fine adjust the Sl and Tl guides so that the oscilloscope RF signal waveform remains the same when high-low is repeated.

- \* Finish the adjustment by screwing in.
- Check the RF signal waveform with the REC MODE switch set to LONG (ATF: ON) and the TIMER switch set to PLAY or REC (OFFSET: + or -).

- Check the RF signal waveform with the REC MODE switch set to LONG (ATF: ON) and the TIMER switch set to OFF (OFFSET: 0).
  - Confirm that the RF signal wavefonn peak value (B) is 60 mV or more.
  - (2) Confirm that the undershoot level of the RF signal waveform's flat portion is within 10%.

7. When the measured values are not within the above tolerance repeat items 3 - 6 above.

Adjustment Point: Mechanism assembly

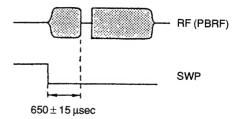

#### **DPG Adjustment**

Perform the following adjustment without fail when the drum has been replaced.

#### Procedure:

- Connect oscilloscope CH-1 to JW183 (PBRF) and CH-2 to JW092 (SWP) on the main board. (Use CH-2 as the trigger. When the CH-2 signal is inverted, the trailing edge can be used for synchronization.)
- Set the test mode (main) and load test tape TY-7252 (8-909-822-00).
- 3. Set the REC MODE switch to LONG (ATF: ON) and the TIMER switch to OFF (OFFSET: 0).
- Press the AMS (►) key. "DPG" will be displayed on the fluorescent indicator tube.
- Press the 
   ← and 
   ← keys as appropriate so that the gap between the oscilloscope SWP and RF signals become 650 ± 15 μsec.

(Hold the ◀◀ and ▶▶ keys down for more than 1 second to perform rough adjustment. Hold them down for approximately 0.2 seconds for fine adjustment, and the auto adjustment can be performed pressing ▷ key.

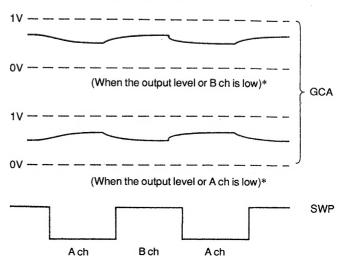

#### **AGC Voltage Check**

Perform this adjustment after cleaning the heads with a cleaning cassette.

#### Procedure:

- Connect oscilloscope CH-1 to JW247 (GCA: Gain Control Amp.) and CH-2 to JW092 (SWP) on the main board. (When the CH-2 signal is inverted, the trailing edge can be used for synchronization.)
- Set the test mode (main) and load test tape TY-7111X (8-909-823-00).
- Set the PLAY (►) mode and check that the GCA waveform on the oscilloscope is as follows.

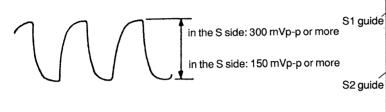

\* Slightly changes depending on the state of the head. NG if the GCA waveform is 1V or more or equal to the ground level.

#### **End Sensor Check**

Perform the following adjustment when the holder has been removed or part of the mechanism deck section replaced.

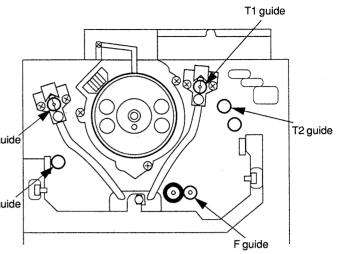

#### Procedure:

- Connect an oscilloscope to the JW158 (SEND: in the S side) and JW143 (TEND: in the T side) of the main board.
- 2. Set the test mode (main), mount an end sensor cassette and effect the STOP ( ) mode.
- 3. Check that p-p values of waveform of the oscilloscope satisfy the following.

# SECTION 5 EXPLODED VIEWS

#### NOTE:

- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked " \* " are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- The mechanical parts with no reference number in the exploded views are not supplied.
- Hardware (# mark) list and accessories and packing materials are given in the last of this parts list.

# **CASSETTE COMPARTMENT MOTOR**

# **CASSETTE COMPARTMENT SW**

NOTE:

The components identified by mark ⚠ or dotted line with mark ⚠ are critical for safety.

Replace only with part number specified.

Les composants identifiés par une marque A sont critiques pour la sécurité.

Ne les remplacer que par une piéce portant le numéro spécifié.

When indicating parts by reference number, please include the board name.

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- Items marked "\*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS All resistors are in ohms METAL: Metal-film resistor METAL OXIDE: Metal Oxide-film resistor F: nonflammable

• SEMICONDUCTORS In each case, u:  $\mu$  , for example: uA...:  $\mu$  A..., uPA...:  $\mu$  PA..., uPB...:  $\mu$  PB..., uPC...:  $\mu$  PC..., uPD...:  $\mu$  PD...

• CAPACITORS  $uF : \mu F$ 

• COILS  $uH : \mu H$ 

 Abbreviation CND: Canadian model

## **SUPPLEMENT-1**

File this supplement with the service manual.

Subject: Changed pattern and circuit of the MAIN board

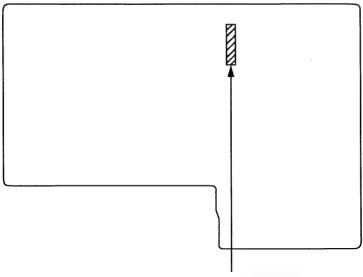

(ECN-TC600575/TC700005/TC700022)

In this set, the pattern and circuit of MAIN board were changed during the production (for serial No., see the following table).
 For the schematic diagram, printed wiring boards, and electrical parts list of the MAIN board, see this service manual supplement-1.

Model	Serial Number
US, Canadian models	After 803701
AEP, UK models	After 501901

• New type discrimination

[MAIN BOARD] (COMPONENT SIDE)

Former type : 1-656-336-21 New type : 1-656-336-22

#### **SECTION 1 ELECTRICAL PARTS LIST**

#### NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used
- -XX and -X mean standardized parts, so they may have some difference from the original
- RESISTORS

All resistors are in ohms. METAL: Metal-film resistor.

METAL OXIDE: Metal oxide-film resistor.

F: nonflammable

• Items marked "\*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.

SEMICONDUCTORS

In each case, u:  $\mu$ , for example:

uA. : μA. . uPB. : μPB. . uPD. : μPD. . uPA. . : μPA. . uPC. . : μPC. .

CAPACITORS

uF: μF

 COILS uH: μH The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety.

Replace only with part number specified.

Les composants identifiés par une marque  $\triangle$  sont critiquens pour la

The components identified by mark △ or dotted line with mark △ are critical for safety. Replace only with part number specified.

Les composants identifiés par une marque  $\triangle$  sont critiques pour la sécurité.

Ne les remplacer que par une pièce portant le neméro spécifié.
